Summary of Qualifications

Full Stack Engineer with **4+ years of professional experience**, specializing in **React**, **Next.js**, and **Node.js**, including hands-on senior-level technical leadership as **Tech Lead at DNA Center** (architecture decisions, code reviews, and mentorship). Skilled in building scalable, production-grade **web** and **mobile** applications, with a strong track record in the **health and wellness** sector.

Skills

JavaScript, TypeScript, HTML, CSS, Kotlin, Swift, SQL, React, Next.js, React Native, Expo, NativeBase/gluestack, Node.js, NestJS, Express, PostgreSQL, MongoDB, Firebase, AWS, TailwindCSS, MaterialUI, Git, GitHub Actions, Jest, Storybook, Figma, Puppeteer, Selenium, Jira/Atlassian, Confluence, Scrum

Professional Experience

Full Stack Engineer | Fully Ecosystem — *São Paulo, Brazil (Remote)* — Jun 2025 - Jul 2026

- Improved authentication speed by **40%** by redesigning the authentication system with ForgeRock.
- Drove engagement across physical activity, nutrition, and mental health goals via a coin-based weekly rewards system redeemable for Uber vouchers.
- Synced user data across platforms by integrating the app with Samsung Health, Apple Health, and Health Connect.
- Built internal admin dashboards in Next.js giving the operations team visibility into user data, weekly goals progress, coin balances, and health-platform integrations.
- Led recurring English-language technical meetings with multiple Prudential teams on architecture, priorities, and bug fixes.

Full Stack Engineer | DNA Center — *Natal-RN, Brazil (Remote)* — Apr 2022 - Jun 2025

- Reduced patient wait times by **50%** by building a real-time queue system using Firebase Firestore real-time listeners.
- Cut manual exam authorization time by **over 80%** by automating workflows across multiple insurance providers, each with a dedicated bot.
- Led the team's technical direction (architecture decisions, code reviews, coding standards) and created the company-wide Design System from scratch, with formal documentation in Storybook and Figma.
- Digitized and stored **millions of medical documents** through a cloud-based platform built on Firebase Storage/Firestore.
- Reduced regressions in deployments through automated testing and CI/CD with Jest and GitHub Actions pipelines.
- Streamlined team workflows by building an internal task management tool (Scrum/Kanban) from scratch, inspired by Jira/Trello.

Full Stack Engineer (Freelancer) | AvaliarMe — *Natal-RN, Brazil (Remote)* — Feb 2023 - Jun 2025

Freelance, part-time, concurrent with the DNA Center role above

- Cut monthly report creation from roughly **2 hours to a single-click download** by automating report generation in clinical dashboards, used by **50+ establishments**.
- Automated **~200 monthly notifications** via WhatsApp Business API (Meta), impacting **1,000+ people**.

Personal Projects

Lumen — Microlearning App: Designed and developed a mobile microlearning app (PT/EN/ES), an alternative to endless social media scrolling for curious professionals aged 25-45. Responsible for marketing (Google Ads), interface design, and development.

More projects available on my portfolio (linked above).

Education

Bachelor's Degree in Systems Analysis and Development | Instituto Federal de Educação, Ciência e Tecnologia do Rio Grande do Norte (IFRN)

Brazilian federal public institution, admission via competitive entrance exam — 2017 - 2023

Capstone Project: Document digitization and management system for medical records, based on the production system built at DNA Center (Firebase Storage/Firestore), presented and defended before an academic committee.

Relevant Coursework: Object-Oriented Programming, Database I & II, Web Development, Software Testing, Distributed Systems, and a 1.5-year applied group project sequence (PDS I, II, III), building a web application from an original concept through distributed and corporate-scale systems.
